

NGUYEN MINH KHANG

Senior Java Backend Engineer

Ho Chi Minh City | khang.nguyen.dev@example.com | +84 903 555 018 | github.com/khangjava

PROFESSIONAL SUMMARY

Backend engineer with 6+ years of experience building Java services for fintech and e-commerce platforms.

Strong in Java, Spring Boot, RESTful APIs, SQL, Maven, Kafka, RabbitMQ, Linux, AWS, and performance tuning.

Delivered high-availability services, improved latency, and collaborated closely with QA, DevOps, and product teams.

CORE SKILLS

Java, Spring Boot, Spring Framework, REST API design, SQL, PostgreSQL, MySQL, Maven, Gradle, Kafka, RabbitMQ, Redis, Docker, Tomcat, Linux, AWS, JUnit, Testcontainers, CI/CD, system design.

PROFESSIONAL EXPERIENCE

Senior Java Backend Engineer | Lumina Commerce | 2022 - Present

- Designed and implemented 18+ Spring Boot microservices for order, payment, and inventory workflows.
- Built RESTful APIs used by web and partner systems, serving 1.8M requests per day.
- Improved p95 response time by 34% through SQL optimization, caching, and async event processing.
- Developed Kafka and RabbitMQ consumers for payment, recommendation, and notification pipelines.
- Wrote automated integration tests and deployment runbooks with QA and DevOps teams.
- Deployed services on AWS EC2, RDS, S3, and CloudWatch with Linux-based runtime operations.

Java Backend Engineer | Nova Fintech | 2019 - 2022

- Developed Java 17 and Spring Boot services for wallet, billing, and user account operations.
- Maintained Tomcat-based internal applications and migrated core APIs to containerized deployments.
- Created SQL data models, stored procedures, and reporting queries for PostgreSQL and MySQL.
- Partnered with systems analysts and product owners to translate business requirements into backend solutions.
- Reduced production incidents by improving validation, logging, retry policies, and test coverage.

Software Developer | Bright Systems | 2017 - 2019

- Built backend modules in Java for document processing and business workflow applications.
- Fixed defects, upgraded interfaces, and improved application performance for enterprise customers.
- Prepared technical reports, implementation notes, and release documentation for project stakeholders.

SELECTED PROJECTS

Payment Event Processing Platform

- Built a Java Spring Boot event-driven platform using RabbitMQ and Kafka for payment status updates.
- Implemented idempotent consumers, retry policies, and monitoring dashboards for message processing.

Merchant Settlement API

- Designed secure RESTful APIs for merchant settlements, reconciliation, and reporting.
